(57) **ABSTRACT**

Estrogen receptor-modulating pyrazole compounds are
described in addition to methods and compositions for
treating or preventing estrogen receptor-mediated disorders.
The compounds described have been found to have unex-
pected and surprising activity in modulating estrogen recep-
tor activity. Thus, the compounds of the present invention
have utility in preventing or treating estrogen receptor-
mediated disorders such as osteoporosis, breast and endome-
trial cancers, atherosclerosis, and Alzheimer's disease.
